

**U.S. Army Medical Command (MEDCOM)
Educational and Developmental Intervention
Services (EDIS)**

**School Year 2004/2005
Annual Report of Compliance**

Submitted to
Office of the Secretary Of Defense
September 2005

Part I - Executive Summary

Executive Summary

Background: The EDIS program provides early intervention services to developmentally delayed infants/toddlers (birth – 36 months), and educationally related allied health services to students receiving special education in DOD Dependents Schools (DODDS) overseas.

Pursuant to the Individuals with Disabilities Education Act (IDEA), as amended by Public Law 102-119 (Sep 1991), the U.S. Army Medical Command (MEDCOM) began implementation of the EDIS in Fiscal Year 1992. The following year, MEDCOM established an EDIS Program Manager position to provide program oversight. By 1995, the Army MEDCOM had fully implemented EDIS at all required locations, and had issued the first Army policy for early intervention services (EIS), MEDCOM Circular 40-4 (Aug 1995). The MEDCOM Circular has been updated and re-issued 5 times.

MEDCOM programmed funding through the Program Objective Memorandum process and administratively “fenced” these funds to ensure that all programs had the resources to meet the requirements of the law and DOD Instructions. These funds have remained administratively fenced since 1994.

Status of Compliance: As of July 2005, all Army EDIS programs under MEDCOM oversight fully meet all applicable Department of Defense (DOD) compliance standards.

In July 2002, The MEDCOM issued a policy requiring a 3-tiered process for ensuring compliance with DOD standards, beginning with self-monitoring at the local level, formal compliance monitoring by the RMC, and compliance verification by HQ MEDCOM through on-site visits, data calls, and reports. The MEDCOM issues a MEDCOM Certificate of Compliance to each EDIS program that achieves successful compliance monitoring results.

The MEDCOM monitors the early intervention services portion of EDIS through the Regional Medical Commands to ensure compliance with the IDEA and DOD regulatory guidance. Each Regional Medical Command formally monitored one out of three EDIS programs under their command and conducted a program status review on the remaining programs through data calls or staff assistance visits.

The MEDCOM ensures continued compliance through sufficient resource allocations, frequent technical assistance, and routine compliance monitoring at all levels of command. Monitoring activities have identified a few areas of partial compliance in Early Intervention Services, but all concerns were immediately addressed, with corrective actions and other improvements tracked through the Organizational Assessment Program (OAP) or staff assistance visits (SAV). All corrective actions are current and complete.

The related services portion of EDIS is a subcomponent of the special education services provided by the DODDS. Monitoring of related services is included in oversight conducted by DODDS with involvement of EDIS managers.

Army EDIS received no requests for mediation or due process during the reporting period.

Program Improvement Initiatives: Since Army EDIS programs have met all minimum compliance criteria, the programs have concentrated on improving quality. Initiatives include:

- Published a revised MEDCOM Policy Circular 40-4 (5th issuance), which was updated to address the 2004 re-authorization of the IDEA.
- Conducted annual EDIS provider training conferences conducted in CONUS and OCONUS, invitations were extended to Navy and Air Force personnel.
- Conducted annual Program Managers' Workshop, which examined outcome measures and the use of data for measuring program compliance and quality.
- Re-emphasized system-wide process improvement activities which were initiated in SY 03/04 to reduce the number of days between referral and service plans, increasing services in the natural environment, improving family partnering and collaboration, and enhancing enhance early identification of eligible children (Child Find). The ongoing success of these initiatives is reflected in Tables C-4, C-5, C-6, and C-8.
- Continued aggressive training toward implementation of family-focused, routine-based activities and strategies for early intervention eligible families.
- Continued efforts to increase delivery of related services for school-aged children within inclusive settings, such as classrooms, rather than therapy rooms.

New focused improvement areas: EDIS initiated improvements during this reporting period include:

- Implementation of revised Individualized Family Service Plans (IFSP), linking the evaluations with services, creating more functional and meaningful IFSPs, and eliminating redundant and time consuming paperwork.
- Clarification of the MEDCOM approach to the mandated Comprehensive System of Personnel Development.
- Implementation of a "primary provider" model of early intervention services – considered best practices in the early intervention field.
- Deployment of a focused compliance monitoring plan.
- Emphasis on measurable outcomes consistent with national initiatives.

Analysis of Operational Data: The following provides an analysis of the operational data reports included with this report.

Population Served:

The Army provides EDIS at 8 Domestic installations, Puerto Rico, Korea, and 17 communities in Europe. On 31 Mar 2005, the 27 Army EDIS teams served 1,212

children on active service plans (Table C-1) – 591 infants and toddlers (CONUS and OCONUS) and 621 school aged children (overseas only). These figures represent a 2.9% drop from last year's figures in early intervention cases and a 6% drop from last year's school-age services.

Europe has seen a 15% decline in EDIS eligible children since Mar 2002. Data suggest that we may be seeing an impact of deployments from Germany and early effects of the Army transformation in Europe.

Early Intervention Services (EIS):

The public law emphasizes early identification of infants and toddlers. The premise of early intervention is tied to the construct; the earlier the intervention, the better the outcome. Table C-6 indicates that the Army serves 2.8% of the estimated population from birth to 12 months of age, as compared to an average of 1.03% reported by the States in the most recent Department of Education annual report to Congress. Of all referrals to EDIS for EIS, 23.5% are received for children less than 12 months of age.

The percentage of early intervention eligible infants/toddlers birth through 36 months of age in the Army EDIS programs is approximately 3.4% (N=593) of the target age group. This figure is well above the 2.2% reported by the States, and is consistent with prevalence data in the medical literature, which reports that approximately 3% of all infants/toddlers require some sort of intervention to enhance development. The success in identifying children at an early age is a reflection of aggressive and effective Child Find activities.

Department of Defense Instruction 1342.12 requires that we develop the Individualized Family Service Plans (IFSPs) within 45 days of referral to EDIS. In this reporting period, 94% of the IFSPs were developed within the 45-day period, up from 82% last year. This gain is a result of focused performance improvement activities across all programs.

The statutes and regulatory guidance require services to be delivered in the child's natural setting. Army EDIS provides EIS primarily in the home (82.6%) or other community-based environments (11.6%), with just over 5% provided in clinic-based settings. Comparatively, the States reported that 77.6% of their EIS were delivered in the home. The active IFSPs contain an average of 1.5 services per family, indicating a significant movement toward the primary provider model of delivery. The most frequently provided services continue to be Speech Language Pathology (32.2%) and Special Instruction (31.4%).

Related Services (RS) for Special Education Students:

EDIS overseas received 550 requests for evaluation of school-aged children, and 766 requests for services from the Department of Defense Dependents Schools (DODDS), for a total of 1,316 requests from DODDS. These figures are slightly down from last year's total of 1,339. The greatest drop was in requests for new evaluations (-7%).

The figure for school-aged children (N=621) receiving related services is approximately 1.85% of the DODDS school enrollment, or 18% of the special education population in DODDS. Occupational therapy continues to be the primary service provided by EDIS to support the DODDS special education program.

Europe continues to increase provision of services in the least restrictive setting, with 42% of the services provided in the regular classroom. Korea has greater challenges, with only 10% of services provided in the classroom.

The MEDCOM received only two Reports of Unavailable Medically Related Services (RUMRS) during the 2004-2005 school-year – one from Hanau, Germany and the other from Heidelberg, Germany. Both RUMRS were pending medical evaluations. They were filed at the end of the school year and were not resolved as of the end date for the report.

EDIS Staffing:

Table C-13 lists 167 multi-disciplinary providers employed in Army EDIS as of 31 Mar 05. Nearly half of this staff was procured through centralized personal services contracts, the remainder through direct Government hire. Approximately another 10 positions were vacant (6%). Staff shortage or turn-over have not presented a problem for Army EDIS programs. Contract positions appear to be a little easier to fill than General Schedule (GS) positions. The Army does not utilize Active Duty personnel for delivery of services within EDIS.
